

Table of Contents

1. Assessment of trihalomethanes formation during the treatment of surface water in coastal areas <i>Pham Thanh Dat, Tran Thi Hien Hoa, Nguyen Viet Anh, Dang Thi Thanh Huyen</i>	1
2. Study on failure mechanisms of rainfall-induced landslides using physical model experiment and numerical analysis <i>Thanh Son Nguyen, Trong-Toan Phan, Cong-Son Ha, Ba-Danh Le</i>	12
3. A novel integrated system utilizing a deep learning approach and the NIOSH lifting index to enhance construction safety <i>Quangdung Tran, Nguyen Anh Duc</i>	28
4. An experimental and numerical study on the innovative metallic box-section damper for improving the behavior of CBF systems <i>Chung Nguyen Van, Ali Ghamari</i>	45
5. Experimental research and artificial neural network-based prediction model on compressive strength of hardened cement pastes containing fly ash and silica fume at high temperatures <i>Do Thi Phuong, Nguyen Van Quang, Vuong Le Thang, Vu Minh Duc</i>	56
6. Techno-economic analysis of capacitive deionization technology: An overview and case studies in Vietnam <i>Dinh Viet Cuong, Dao Thuy Ninh, Nguyen Manh Dung</i>	72
7. Study on the positioning efficiency of GNSS RTK for road profile surveys - case study in Vietnam <i>Tran Dinh Trong, Luong Ngoc Dung</i>	86
8. The influence of distraction and workplace policies on mental states and productivity in masonry tasks <i>Nguyen Anh Duc, Quangdung Tran</i>	99
9. Stability analysis of a square tunnel in cohesive-frictional soils using the stable node-based smoothed finite element method <i>Thien Vo-Minh</i>	113
10. Mekong delta salinity risk assessment using spatial analysis and the Iyengar-Sudarshan method <i>Bui Duy Quynh, Ha Thi Hang, Tran Xuan Truong, Luu Thi Dieu Chinh</i>	130
11. Probabilistic safety assessments of truss structures designed by AISC 360-16 and EC 3 <i>Nhu Son Doan</i>	149
12. Automated evaluation of unsafe working postures in lifting and carrying heavy objects in construction using a CNN deep learning model <i>Quangdung Tran</i>	163
